

Instructions for the game Tajmat

Board and placement of figures. The game is played by two players with 18 game figures in the form of white and black Arabic and Roman numerals by moving them. The number of squares in the game is 89 (Fig. 1).

The initial placement of pieces on the board, or the so-called starting position:

in 1st row - 1;

3rd row - X-7-X;

4th row - 2-5-8-9-6-4-3;

in 5th row - II-V-VIII-IX-VI-IV-III

The movement of pieces on the board (or moves) is shown in Fig. 2

Starting the game. Both partners must play in turns, making one move each time. A partner who has white pieces starts the game first.

The general concept of movements. A move may consist of taking the opponent's piece, and the piece that made the take is put in place of the beaten piece. Such a move is called a take. The only figure that cannot be accepted and removed from the board is figure 1. Roman numerals can go left or right on 45 degrees away from the opposite color of the cell (field).

The number 1 can go on all 8 sides to any one cell next to it;

The number 2 can walk in its color to 1 cell next to it vertically (horizontally);

The number 3 can walk in its color on 1 adjacent cell vertically (horizontally) and on 1 opposite color of the cell at an angle of 45 degrees from itself;

The number 4 can only walk in its color at any distance of the cell;

The number 5 can walk in its cell color in the form of the letter "T" 1 cell vertically (horizontally) and vertically (horizontally) one cell;

The number 6 can walk along its color cells 2 cells vertically, and then 1 cell horizontally;

The number 7 can go to any distance of cells in all 8 directions;

Figure 8 can walk at a 45-degree angle to any number of cells and in all directions;

The number 9 can go to 1 cell on all 8 sides;

If figures with Roman numerals enter the enemy's cell in place X, then it becomes equivalent in value to a figure with Arabic numerals, figures in the shape of X turn into any figure with Arabic numerals, except 1.

The figures in their direction can give the number 1 - taj. When attacking, the walking number 1 can hide behind other figures, or the number 1 can move to another field.

Attacking figures cannot enter the zone of the digit 1, the border of the zone of the digit 1 is precisely marked on the board. During the taj to the number 1, if the next move is impossible, the game ends with the victory of the opponent mate.

Draw. The game ends in a draw: In a situation where the possibility of a win is excluded (Ex: insufficient material - 1 vs. 1, etc.); If a player's figure 1 (at his turn turn) is not under the taj and the player cannot make a single move. This position is called a stalemate.
